Sequences AAS63224-AAS63305 represent cDNA encoding and PCR primers used CC chimeric proteins comprising a DNA mutation-binding protein, a linker and CC anuclease, by recombinant technology. The chimeric proteins are useful CC for detection, quantification and mapping of DNA sequence variations including mutations, for example, caused by damage and mismatches. The CC proteins are able to bind to the site of the DNA mutation and cut it out of the molecule. This is useful for early diagnosis of cancer and other CC diseases. The proteins used in the invention include human XFF (or CC (AISEASESE, The proteins used in the invention include human XFF (or CC (AISEASESE, THE PROTEINS USED IN MINISTER (AISEASE), buman xeroderma pigmentosum complementation groups A, C and E (CC (XPA, XPC and XPE), human Muts homologue 2 (hMSH2), Serratia marcescens CC (MSH2), Thermus thermophilus Muts, Escherichia coli Fapy-DNA CC glycosylase (Muty), synthetic T4 endonuclease V (T4 endo V), thymine DNA-CC (Slycosylase (TDG), E. coli Uvr A, B and C, and E. coli endonucleases and

                                                                                                                                     CC The present invention describes a method for predicting the epidemic CC character of a Mycobacterium tuberculosis isolate and/or a selective CC advantage to be maintained in the host and/or the acquisition of multiple CC drug resistance (MDR) by the isolate comprising detecting an alteration of the DNA repair system of the isolate. Also described: (1) detecting a CC Mycobacterium tuberculosis strain with a MDR phenotype; (2) a CC polynucleotide; (3) a kit for detecting Mycobacterium tuberculosis; (4) an Escherichia coli strain containing the plasmid pMYC2501; and (5) CC detecting in a patient infected by Mycobacterium tuberculosis a higher CC risk of being unable to eliminate the bacillus or of developing MDR CC riberculosis. The method is useful for predicting the epidemic character CC of a Mycobacterium tuberculosis isolate and/or a selective advantage to be maintained in the host and/or the acquisition of MDR by the isolate. CC The present sequence represents a M. tuberculosis muty open reading frame companies.

```

The present invention describes a method for predicting the epidemic CC character of a Mycobacterium tuberculosis isolate and/or a selective advantage to be maintained in the host and/or the acquisition of multiple CC drug resistance (MDR) by the isolate comprising detecting an alteration in the DNA repair system of the isolate comprising detecting an alteration CC Mycobacterium tuberculosis strain with a MDR phenotype; (2) a CC polynucleotide; (3) a kit for detecting Mycobacterium tuberculosis; (4) and Escherichia coli strain containing the plasmid pMYC2501; and (5) CC detecting in a patient infected by Mycobacterium tuberculosis a higher CC risk of being unable to eliminate the bacillus or of developing MDR CC tuberculosis. The method is useful for predicting the epidemic character CC of a Mycobacterium tuberculosis isolate and/or a selective advantage to be maintained in the host and/or the acquisition of MDR by the isolate. CC The present sequence represents a M. tuberculosis muty nucleotide and/or the exemplification of the present invention or the present invention of the present invention or the present invention of the present invention or the present in the present in C; 457 G; 211 T; 0
